1) is there a way to disable the assistant button? 2) is there a bug filed for it being impossible to exit the assistant popover using escape / alt tab? 3) if not, where do I file such a bug?

**Deleted on** November 20, 2020 at 1:03:12 PM UTC

Yes: you set up the assistant first, then disable it. go/pixelbook-tips for more like this
http://goto.google.com/pixelbook-tips

**simeonv@google.com** December 19, 2018 at 6:47:54 PM UTC

My assistant button stopped working correctly after one day. You can go into settings and disable Google Assistant. Easiest way to do it is to just search for Assistant in settings

**Deleted on** November 20, 2020 at 1:03:12 PM UTC

At some local Linux User Group, one guy was wanting to install a full regular Linux on his Chromebook, because of some sort of dislike about Google. My question to him was: if you don't like Google, why buy a chromebook? It seemed silly to me.
**Deleted on** November 20, 2020 at 1:03:12 PM UTC

i wonder if he has ever (or even would ever) give a talk at Google

**lasnik@google.com** December 19, 2018 at 10:14:57 PM UTC

Devin, yeah, it can be confusing. **Basically, I try to imagine what it'd be like sitting in court with an opposing-team lawyer taking my words out of context, and then I try not to write those words down in a discoverable medium.** Especially sensitive: privacy, security, finance, competitive landscape (monopoly, crushing competition, etc.). e.g., ixnay to "our app practically leaks our users' data like a sieve! Good thing we basically crushed our competitors earlier!" So yeah, erroring on the side of caution makes for less interesting, sometimes even less useful written communication. But that's why we have off-the-record chats, VCs, in-person meetings, phone calls, etc. (for when we really *are* worried about something specifically ending up in court or resulting in Bad Stuff(tm).

**Deleted on** November 20, 2020 at 1:03:12 PM UTC

**kanepyork@google.com** December 19, 2018 at 10:40:20 PM UTC

For Googlers using a corporate device, I'm going to assume that language for Assistant is bordering on incorrect, especially with the "full screen capture" thing - Google is not a third party, it's your employer. Google knows about and can verify the data security and audit trail.

**Deleted on** November 20, 2020 at 1:03:12 PM UTC

**vimproponent@google.com** December 20, 2018 at 4:49:47 PM UTC

I think USB-A will be less useful over time, as we move to USB-C. It's also inconvenient that you can't use the same charger to charge both this laptop and your phone through the same USB-C port.

**Deleted on** November 20, 2020 at 1:03:12 PM UTC

**devinj@google.com** December 20, 2018 at 4:57:09 PM UTC

maybe less convenient to reach though

I consider those no-travel Apple keyboards completely unusable.

**Deleted on** November 20, 2020 at 1:03:12 PM UTC

I consider those no-travel Apple keyboards completely unusable.

**devinj@google.com** December 20, 2018 at 5:04:58 PM UTC

wait do they actually have zero or near-zero travel? like a laser keyboard?

**Deleted on** November 20, 2020 at 1:03:12 PM UTC

wait do they actually have zero or near-zero travel? like a laser keyboard?

**dgoyette@google.com** December 20, 2018 at 5:05:41 PM UTC

It's nearly zero, so I was only slightly exaggerating.

"i wish they'd just put another USB-C port instead of a proprietary charging port" As a longtime MacBook user & current SurfaceBook 2 owner I'd say that the Surface charger is an even better version of a MagSafe. I lived the new MacBook design life and not having magsafe is quite painful

**Deleted on** November 20, 2020 at 1:03:12 PM UTC

**simeonv@google.com** December 20, 2018 at 5:30:17 PM UTC

@Jimmy Cao "I'm quite jealous of the macbook people being able to use their touchbar" I found the touchbar a pain to use. I'm a touch typist and not being able to feel what the buttons are before I press them is a huge drawback

**Deleted on** November 20, 2020 at 1:03:12 PM UTC

**simeonv@google.com** December 20, 2018 at 5:31:48 PM UTC

@Devin Jeanpierre the travel on the new keyboard is low enough that I've accidentally triggered keypresses when trying to lightly touch the keyboard to find the home row. It's kinda infuriating

**Deleted on** November 20, 2020 at 1:03:12 PM UTC

**jagonzal@google.com** December 20, 2018 at 7:43:20 PM UTC

I went to the ergo center in B46 to try out all the laptops when I was up for refresh from my macbook pro 15" - the new macbook keyboard had such a short travel that I did my usual typing test (https://www.typingtest.com/) it actually made my fingers/joints hurt, in 60 seconds!

I went with the pixelbook because I was already using the 15" macbook as a chromebook, so I figure why not, and the keyboard on the pixelbook is really sweet

**Deleted on** November 20, 2020 at 1:03:12 PM UTC

**jagonzal@google.com** December 20, 2018 at 7:44:43 PM UTC

I wish there was a 15" or even 14" chromebook - I don't want itsy bitsy teeny text! But i also want to be able to fit a critique window without scrolling to the side

**Deleted on** November 20, 2020 at 1:03:12 PM UTC

**oars@google.com** December 20, 2018 at 7:46:56 PM UTC

yes, a larger screen (or smaller bezel) for the pixelbook is all I want.

**Deleted on** November 20, 2020 at 1:03:12 PM UTC

**jagonzal@google.com** December 20, 2018 at 7:51:42 PM UTC

also real resolution of 1920x1080 or something like that, the pixelbook does 2400x1600, but for me it's unusable at anything higher than 1500x1000

**Deleted on** November 20, 2020 at 1:03:12 PM UTC

**oars@google.com** December 20, 2018 at 8:01:37 PM UTC

I actually find myself switching the resolution fairly often on the pixelbook depending on what I'm doing, it's super quick and easy through keyboard shortcuts

**Deleted on** November 20, 2020 at 1:03:12 PM UTC
